

Destination Bulk Citrus Movement Risk Mitigation Strategies

Exhibit “III”

April 6, 2016

The following risk mitigation strategies are intended to assist the processor in preventing the introduction of glassy-winged sharpshooters into non-infested areas:

- 1) Reroute infested shipments to processors in infested areas.
- 2) Distribute industry produced pamphlets or educational cards to field personnel, regarding the artificial spread of GWSS.
- 3) Other strategies as approved by the Department and County Agricultural Commissioner.
- 4) Ensure all management practices and mitigation measures are consistent with the California Department of Food and Agriculture’s (CDFA) Statewide Pest Prevention Program Final Programmatic Environmental Impact Report.
